

Lab4

NYCU Go Programming 2024

2024/10/15

URL

- URL = protocol://host:port/path?query
- Example: <http://localhost:8084/lab04?op=add&num1=1&num2=1>

Request

```
r.URL.Query().Get(...)
```

func ServeFile(w ResponseWriter, r *Request,
name string)

http.ServeFile(w, r, "some.html")

html/template

Package `template` (`html/template`) implements data-driven templates for generating HTML output safe against code injection.

```
func ParseFiles(filenamees ...string)  
(*Template, error)
```

ParseFiles creates a new Template and parses the template definitions from the named files.

```
func (t *Template) Execute(wr io.Writer,  
data any) error
```

Execute applies a parsed template to the specified data object, writing the output to wr.

Cont.

```
var mary = Student {  
  Name: "Mary",  
  Age: 20,  
  Height: 164.7  
  Weight: 42.1  
}
```

```
<body>  
  <div>Student Name: {{.Name}}</div>  
  <div>His / Her age: {{.Age}}</div>  
  <div>His / Her height: {{.Height}}</div>  
  <div>His / Her weight: {{.Weight}}</div>  
</body>
```

```
Student Name: Mary  
His / Her age: 20  
His / Her height: 164.7  
His / Her weight: 42.1
```

```
<body>  
  <div>Student Name: Mary</div>  
  <div>His / Her age: 20</div>  
  <div>His / Her height: 164.7</div>  
  <div>His / Her weight: 42.1</div>  
</body>
```

```
err := template.Must(template.ParseFiles("some.html")).Execute(w, mary)
```

Lab4 Simple web calculator again!

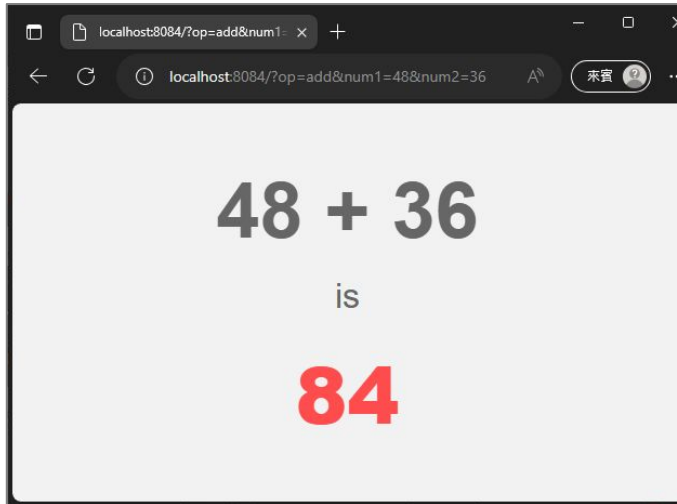

撰寫一個計算機，網址格式如下，query 要有 op, num1, num2 即可

`http://localhost:8084?op=<str>&num1=<int>&num2=<int>`

Operation: add / sub / mul / div / gcd / lcm

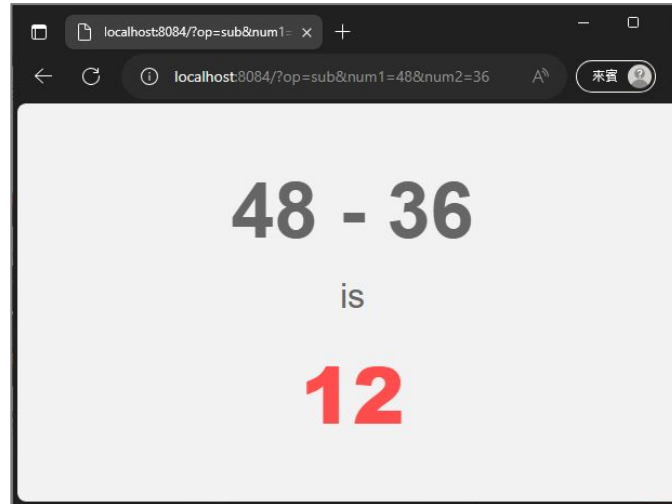

Lab4 Simple web calculator again!

Operation: add / sub / mul / div / gcd / lcm

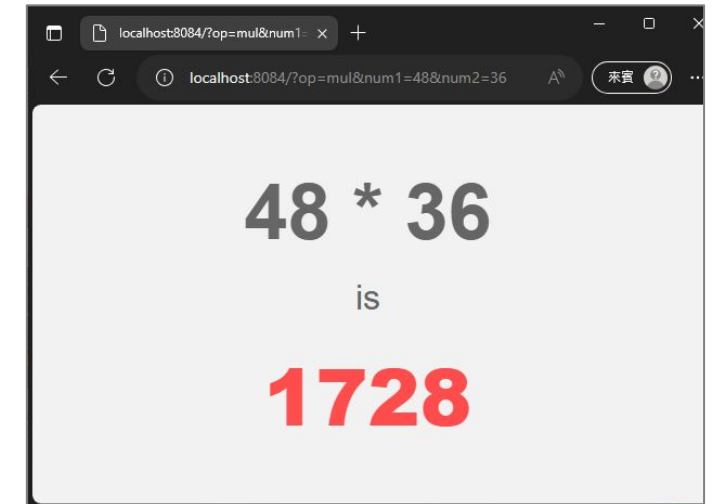

localhost:8084/?op=add&num1=48&num2=36

48 + 36
is
84

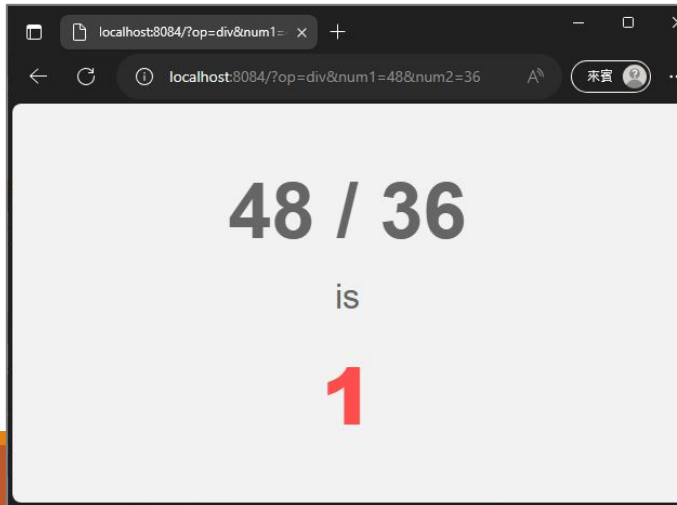

localhost:8084/?op=sub&num1=48&num2=36

48 - 36
is
12

localhost:8084/?op=mul&num1=48&num2=36

48 * 36
is
1728

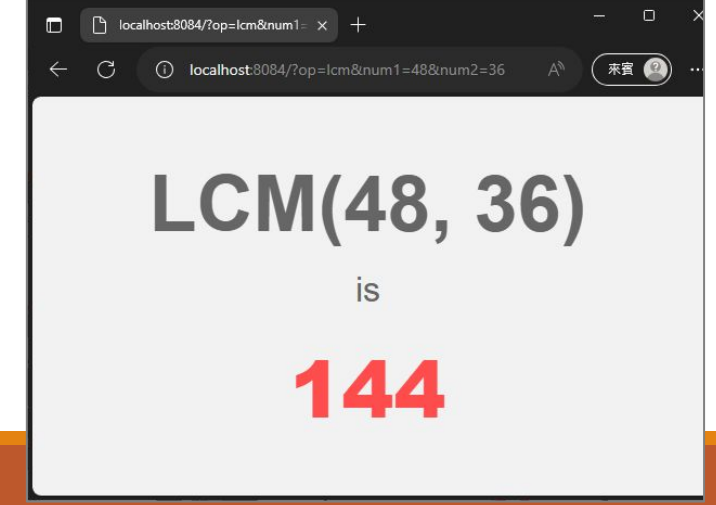

localhost:8084/?op=div&num1=48&num2=36

48 / 36
is
1

localhost:8084/?op=gcd&num1=48&num2=36

GCD(48, 36)
is
12

localhost:8084/?op=lcm&num1=48&num2=36

LCM(48, 36)
is
144

Lab4 Simple web calculator again!

若格式不符，或造成計算錯誤，顯示Error Page

Lab4 Simple web calculator again!

1. 新增目錄 lab4 - `$mkdir lab4`
2. 移動至 lab4 - `$cd lab4`
3. `$go mod init lab4`
4. 加入 lab4.go, lab4_test.go, index.html, 與 error.html
5. 完成 lab4.go 中的函數 Calculator()
6. `$go mod tidy`
7. `$go run .` 然後在 browser 嘗試連線
8. `$go test`
9. 在 .github/workflows 裡面加入 lab4.yml
10. 上傳至 GitHub 並繳交連結
